December 8, 1986

Robert Raymond Green
45 South Main Street
Heber City, UT 84032

Dear Dr. Green:

The response to my letter of September 12, 1986 asking our alumni to contribute to the School of Medicine's Annual Fund has been gratifying - we are well started toward our goal. Perhaps your gift was on the way when this letter was prepared. If so, please accept my sincere thanks. If you have not yet decided upon a contribution, I hope the additional information in this letter will be helpful.

Within the next few weeks, a university student will call to ask for your help in reaching this year's Annual Fund goal for the School of Medicine. Many of your fellow alumni and friends have been very generous - but we can't do it without you. Before you decide, I hope you'll take a moment to consider what the School of Medicine has meant in your life.

The School of Medicine ranks in the top third of the nation's medical schools in most areas. New programs such as those in Medical Informatics, Human Genetics, and Lasers pursue concepts and technologies almost unheard of a few years ago. The growing excellence of the School of Medicine ensures both a superior medical education today and the value of your own degree.

The School's impact on the advance of medical knowledge is equally impressive. More than 400 research projects worth more than \$36 million a year are conducted by the 541 full-time faculty members of the School of Medicine. The results are often translated immediately into improved patient care. Research also make a substantial economic contribution to the University budget and to the community. Many new high technology companies have chosen to locate here because of the vitality and relevance of faculty research. Every dollar you provide is multiplied many times in the returns it provides.
